

Configuration

Configuring the addon is very easy. You simply select the promotion codes you want to make available to your Facebook fans. The addon will automatically create unique single use promotion codes for your Facebook fans when they access your Facebook page.

Go to Addons > Facebook Promotions.

URL for setting up your Facebook App: <http://www.clientcentral.info/?m=fbpromo>

App ID: 340016769992722

App Secret: b5f13a687e3c99ef4c46a581c24e8b9b

Promotions available to your Facebook App:

- ☐ BAR110
- ☐ BLACKFRIDAY
- ☐ EDU30
- ☒ FBRIDGE
- ☐ FREE
- ☐ MCS9
- ☐ MY25OFF
- ☐ SP25
- ☐ TRIAL
- ☐ WHT
- ☐ WSLIVE

(1) provides 25% discount on our WHMCS Bridge plugin for Wordpress

Description to appear on your Facebook App page:

The first field will give you the full URL you will need to use when setting up your Facebook app. Once you have set up your Facebook app you can enter your App ID and App secret here.

Next you select the WHMCS promotion codes you want to make available to your Facebook fans. Once a Facebook fan has accessed your Facebook page, they will see a unique code for them in the format:

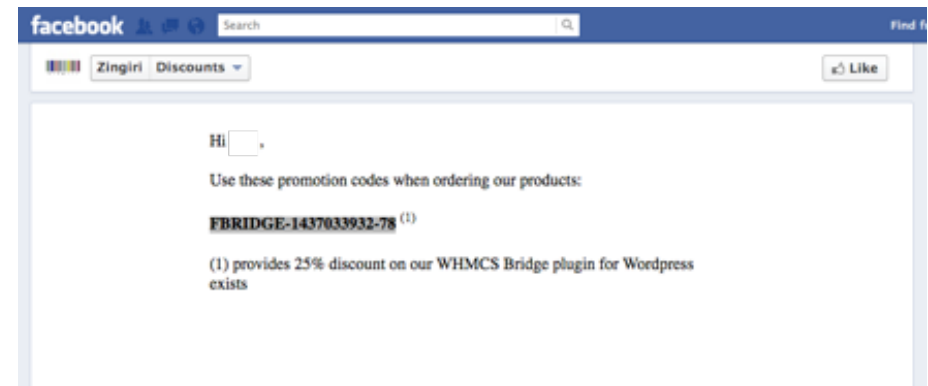

[WHMCS promotion code]-[Facebook user id]-[check digit]

For example: FBRIDGE-1437033932-78

The description field will appear on your Facebook page and you can enter some text to explain what the promotion codes are for.

Click 'Save Settings' when done.

A Facebook fan will be presented with the following screen.

The code will be valid for 30 days and for a 1 time use only.

SECTION 3

Creating a Facebook app

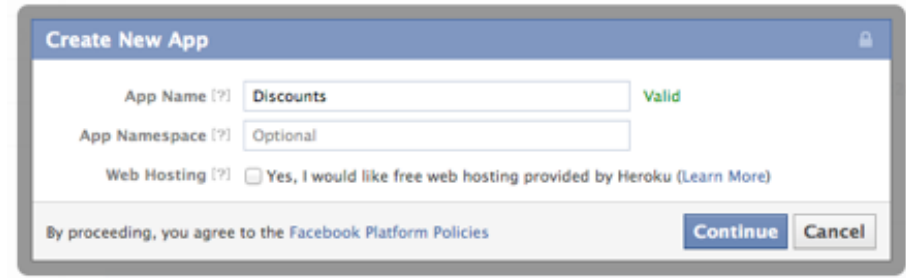

To make the link between your Facebook page and your shop you will need to set up a so called Facebook app.

Some good documentation about Facebook apps can be found at these links

<http://developers.facebook.com/docs/appsonfacebook/tutorial/> and
<http://developers.facebook.com/docs/appsonfacebook/pagetsabs/>.

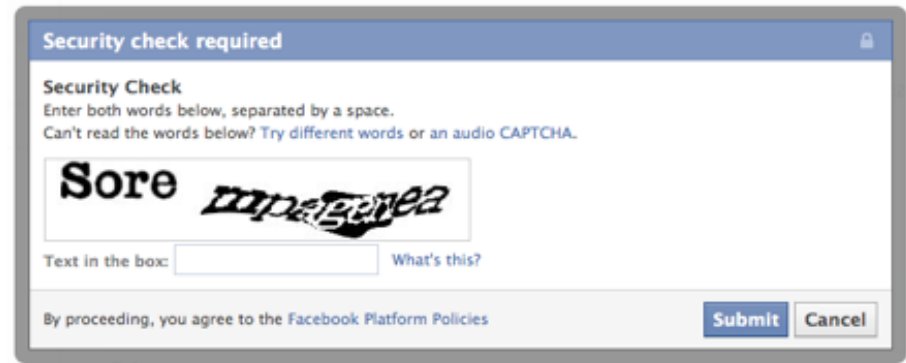

But we'll try to guide you step by step on how to do this. It all starts at this link: <https://developers.facebook.com/apps>.

Click 'Create New App' and fill in the App name, for example 'Discounts'.

The screenshot shows the 'Create New App' form. The 'App Name' field contains 'Discounts' and is marked as 'Valid'. The 'App Namespace' field contains 'Optional'. The 'Web Hosting' field has a checkbox for 'Yes, I would like free web hosting provided by Heroku (Learn More)'. At the bottom, there is a checkbox for 'By proceeding, you agree to the Facebook Platform Policies' and two buttons: 'Continue' and 'Cancel'.

You will then be requested to verify a security code.

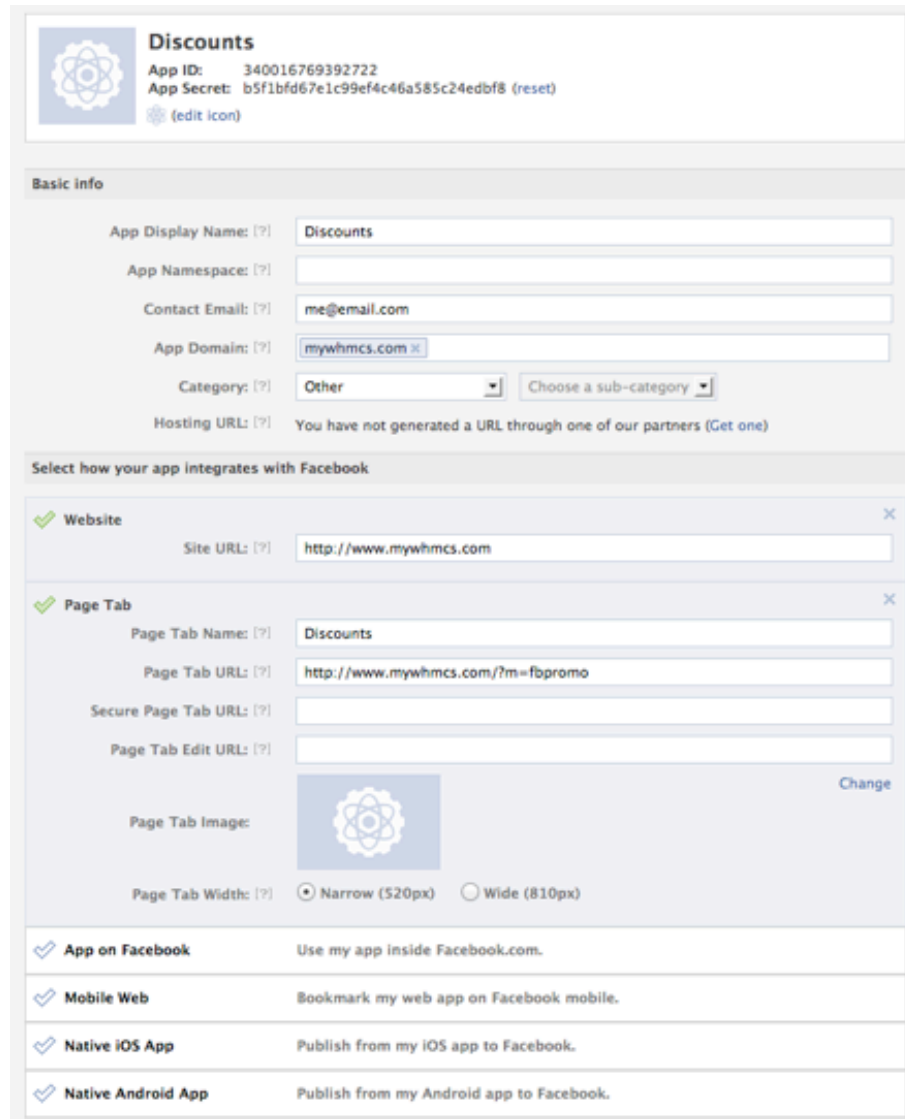

The screenshot shows the 'Security check required' form. It displays a security check with the words 'Sore' and 'mopagene2' separated by a space. Below the words is a text input field labeled 'Text in the box:' and a button labeled 'What's this?'. At the bottom, there is a checkbox for 'By proceeding, you agree to the Facebook Platform Policies' and two buttons: 'Submit' and 'Cancel'.

In the next screen you will need to select the type of app we're creating. In this case it's a 'Page Tab' on Facebook. You will find the exact URL to enter in the Addons menu of your WHMCS installation. You will also need to activate the 'Website' integration and fill in your WHMCS URL there.

In App Domain in Basic Info you also need to fill in your WHMCS domain.

Take note of the App ID and the App Secret as you will need this later on.

The screenshot shows the Facebook App Settings interface for an app named "Discounts". At the top, the App ID is 340016769392722 and the App Secret is b5f1bfd67e1c99ef4c46a585c24edbf8. Below this is the "Basic info" section with fields for App Display Name (Discounts), App Namespace, Contact Email (me@email.com), App Domain (mywhmcs.com), Category (Other), and Hosting URL. The "Select how your app integrates with Facebook" section is expanded, showing options for Website, Page Tab, App on Facebook, Mobile Web, Native iOS App, and Native Android App. The Page Tab section is further expanded, showing fields for Page Tab Name (Discounts), Page Tab URL (http://www.mywhmcs.com/?m=fbdiscounts), Secure Page Tab URL, Page Tab Edit URL, Page Tab Image, and Page Tab Width (Narrow (520px) selected).

Discounts
App ID: 340016769392722
App Secret: b5f1bfd67e1c99ef4c46a585c24edbf8 (reset)
(edit icon)

Basic info

App Display Name: [?] Discounts
App Namespace: [?]
Contact Email: [?] me@email.com
App Domain: [?] mywhmcs.com
Category: [?] Other Choose a sub-category
Hosting URL: [?] You have not generated a URL through one of our partners (Get one)

Select how your app integrates with Facebook

Website Site URL: [?] http://www.mywhmcs.com

Page Tab
Page Tab Name: [?] Discounts
Page Tab URL: [?] http://www.mywhmcs.com/?m=fbdiscounts
Secure Page Tab URL: [?]
Page Tab Edit URL: [?]
Page Tab Image: [?] Change
Page Tab Width: [?] ☒ Narrow (520px) ☐ Wide (810px)

☒ App on Facebook Use my app inside Facebook.com.
☒ Mobile Web Bookmark my web app on Facebook mobile.
☒ Native iOS App Publish from my iOS app to Facebook.
☒ Native Android App Publish from my Android app to Facebook.

That's it your application has been created.

You now need to link this App to your Facebook page. You can simply navigate to this URL in your browser:

https://www.facebook.com/dialog/pagetag?app_id=YOUR_APP_ID&next=YOUR_URL

Replace "YOUR_APP_ID" with your App ID and "YOUR_URL" with your App's Canvas URL, both of which values are available in your app settings.

In our example, this would be:

https://www.facebook.com/dialog/pagetag?app_id=340016769392722&next=http://www.mywhmcs.com/?m=fbdiscounts

This will bring up a dialog box where you can attach the app to your page. Once done the app will appear as a tab on your page, like here:

APPS.
FOR SMALL BUSINESSES
WITH BIG IDEAS.

Zingiri
